Foreword	9
Introduction	11
Acknowledgements	15
1 Introduction to ETCS.....	19
1.1 Present and future requirements for Interoperability	19
1.1.1 ETCS Background	19
1.1.2 Requirements	19
1.1.3 Future developments – Baseline 3	19
1.2 Motivating factors for adopting ERTMS/ETCS and Requirements	23
1.2.1 As seen by the Railway Undertakings (RU)	26
1.2.2 As seen by the Infrastructure Managers (IM).....	26
1.3 The Driver's View.....	28
1.3.1 The man-machine Interface	28
1.3.2 Operating in Level 0	28
1.3.3 Operating in Level STM (Specific Transmission Module)	29
1.3.4 Operating in Level 1	29
1.3.5 Operating in Level 2 and 3	30
1.4 Basic features of ETCS sub-systems and interfaces	31
1.4.1 The ETCS environment	31
1.4.2 Components and interoperability requirements	31
1.5 Integration of ETCS into a consistent signalling system.....	35
1.5.1 Outline of ETCS Levels	35
1.5.2 Integration of ETCS Level 1 into a consistent signalling system	35
1.5.3 Integration of ETCS Level 2 into a consistent signalling system	36
1.5.4 Integration of ETCS Level 3 into a consistent signalling system	37
1.6 System data requirements.....	38
1.6.1 The importance of data.....	38
1.6.2 Infrastructure data.....	38
1.6.3 Rolling stock data	39
1.7 Organisations and their tasks.....	41
1.7.1 At European level: European Commission (EC), and involved Directorates	41
1.7.2 At national and international level	41
1.7.3 Railways	41

1.7.4	Representative associations and similar bodies.....	41
1.7.5	Co-operative entities for specification development or route development	41
1.7.6	International organisations playing a world wide role	41
1.7.7	A detailed explanation of the bodies and their roles can be found in the UIC ERTMS Compendium, Chapter 2.3 – Involved Parties at European Level.	41
2	System Description of ETCS	43
2.1	ETCS Levels	43
2.1.1	Explanation of Levels	43
2.1.2	Level 0.....	45
2.1.3	Level 1.....	47
2.1.4	Level 2.....	49
2.2	ETCS Levels and Transitions	51
2.2.1	Level 3.....	51
2.2.2	Level STM (Specific Transmission Module).....	55
2.2.3	Mixed Levels.....	58
2.2.4	Level Transitions	60
2.3	Modes and their functionality.....	64
2.3.1	ETCS modes	64
2.3.2	Definition and description	65
2.3.3	Mode transitions using selected examples	68
2.4	Opening Scenarios.....	72
2.4.1	Start up	72
2.4.2	Entry into ETCS	78
2.4.3	Change of mode.....	80
2.4.4	Cross border movements	87
2.4.5	System Failure	89
2.4.6	Shut Down.....	89
2.5	Message language and structure.....	90
2.5.1	Components of ERTMS/ETCS language	90
2.5.2	Messages and Telegrams	91
2.5.3	Packing and unpacking	95
2.5.4	Data consistency	96
2.5.5	Limitations and timing constrains	98
2.6	Message sequence and data flow	100
2.6.1	Continuous train movement and ETCS constraints	100
2.6.2	Requirements for continuous train movement	101
2.6.3	Message Sequence and Data flows	102
2.6.4	Influence of operational and engineering rules	109

2.7	Cross Border Interoperability	111
2.7.1	RBC-RBC Handover across Control Boundary or Supplier Boundary	111
2.7.2	Different rolling stock suppliers on same infrastructure	117
2.7.3	Many combinations of infrastructure and rolling stock	121
2.7.4	Different versions installed on train and infrastructure	122
2.7.5	National STM and packet 44 solutions	124
2.8	Basic principles of Odometry	126
2.8.1	Odometry	126
2.8.2	Odometry errors and confidence interval.....	126
2.8.3	Profiles	128
2.8.4	Linking	129
2.8.5	Infill	129
2.8.6	National Values NV.....	129
2.8.7	Repositioning.....	130
2.9	Management of the system	131
2.9.1	System Initialisation.....	131
2.9.2	ETCS contribution to infrastructure maintenance	134
2.9.3	ETCS contribution to managing traffic disturbances.....	135
2.10	Performance and quality of service	136
2.10.1	Performance and quality of service for Level 1	136
2.10.2	Performance and quality of service for Level 2	140
2.10.3	Performance and quality of service for Level 3	141
2.10.4	Influence of mixed Level 1 and Level 2 on performance	141
2.10.5	Migration plan and quality of service possible.....	141
3	Sub-Systems and Processes.....	143
3.1	Safe Data Communication.....	143
3.1.1	Protocols	143
3.1.2	Threats	143
3.1.3	Countermeasures	144
3.2	The Train and Control Centre Data Link.....	147
3.2.1	Description of the EVC-RBC path	147
3.2.2	EuroRadio.....	156
3.3	RBC Interfaces	169
3.3.1	RBC-RBC interfaces	169
3.3.2	Interfaces between the RBC and surrounding systems	170

3.4	The track data interface.....	173
3.4.1	Eurobalise/Antenna/Balise Transmission Module.....	173
3.4.2	Euroloop, Radio Infill, Infill by Eurobalises	182
3.4.3	Signalling/Interlocking interfaces to the LEU for Level 1	188
3.5	The on board Interfaces.....	193
3.5.1	Generic considerations for on board architecture	193
3.5.2	The TIU.....	194
3.5.3	The DMI.....	195
3.5.4	The Juridical Recorder Unit	197
3.5.5	National STMs	199
3.6	Movement Authority and Track Description	202
3.6.1	Movement authorities	202
3.6.2	Compilation and Use of Trackside Information.....	203
3.6.3	Message sent from Trackside – Level 1 and Level 2/3	207
3.6.4	Synchronisation between Trackside and On board.....	208
3.6.5	Update of MA	209
3.6.6	Danger Point and Overlap.....	209
3.7	Speed Supervision and Control.....	211
3.7.1	The Speed-Distance Envelope.....	211
3.7.2	Preparing the Speed-Distance Envelope.....	211
3.7.3	Ceiling Speed Monitoring	214
3.7.4	Target Speed Monitoring.....	214
4	ETCS Validation and Certification.....	217
4.1	Scope and validity of certification.....	217
4.1.1	General principles of certification.....	217
4.1.2	Validity and reuse of certificates	218
4.1.3	Certification of STMs.....	219
4.1.4	The certification process	219
4.1.5	Expiry of constituent certificates.....	223
4.2	Subsystem test, safety approval and certification	224
4.2.1	Concept of constituents, subsystems and system	224
4.2.2	Requirements to be fulfilled	224
4.2.3	Compliance with requirements.....	224
4.2.4	Declaration of conformity and declaration of verification	226
4.2.5	ETCS signalling test concept	227

4.3	Example of System Validation and Certification – the Madrid suburban lines	233
4.3.1	Short overview of the European process	233
4.3.2	Methodology for a certification of conformity for the ETCS constituents	235
4.3.3	Validation of commercial projects and the role of the reference laboratories	240
4.3.4	Process followed for the implementation of the ERTMS on the Suburban Lines in Madrid	242
4.3.5	The way towards the validation of Level 2 in laboratory	246
4.3.6	Upgrading the reference laboratories	248
4.3.7	Future developments	253
4.4	System Integration Testing and Commissioning	255
4.4.1	Building trust	255
4.4.2	Approvals and Permits	255
4.4.3	Traditional wayside systems testing	255
4.4.4	Traditional rail vehicle testing	256
4.4.5	Test strategy	256
4.4.6	Operational test planning	257
4.4.7	Production issues	258
4.4.8	Fleet maintenance issues	258
4.4.9	Operational hazard analysis	258
4.5	Testing and commissioning a multi-system project with complex interacting systems	261
4.5.1	System testing considered	261
4.5.2	Principal differences in allocation of functions	261
4.5.3	System scope	261
4.5.4	What to check	261
4.5.5	Case study	262
4.5.6	How to proceed	264
4.6	Driver training, certification, language issue	266
4.6.1	Background, driver training and education	266
4.6.2	Summary of general driver education	266
4.6.3	ETCS driver education	267
4.6.4	The ETCS Level 2 training module	267
4.6.5	Regular ETCS driver education	270
4.6.6	Discussion of experience gained	272
5	Engineering	273
5.1	Engineering for trackside projects in Level 1	273
5.1.1	Project definition and requirements	273
5.1.2	Organisational requirements	273

5.1.3	Operational requirements.....	273
5.1.4	Technical prerequisites.....	274
5.1.5	Amendment and revision of planning documents.....	276
5.2	Lineside engineering for Level 2.....	279
5.2.1	Information required for Level 2.....	279
5.2.2	Application engineering.....	283
5.2.3	The need for data.....	283
5.2.4	Generic rules for data preparation.....	284
5.2.5	RBC-Interlocking interaction.....	287
5.2.6	Location of balises.....	287
5.2.7	Balise linking.....	287
5.2.8	Text messages.....	287
5.2.9	Train position report.....	287
5.3	Engineering for on board units.....	288
5.3.1	Hardware engineering.....	288
5.3.2	Main items and constraints for installation.....	290
5.3.3	Installation of components.....	291
5.3.4	Data engineering.....	295
6	Maintenance, Faulting and Safety Monitoring.....	297
6.1	Organisational Aspects.....	297
6.2	Operation.....	297
6.2.1	The Driver.....	298
6.2.2	Environment.....	299
6.2.3	Access to the track.....	299
6.2.4	Modification of the trackside.....	299
6.3	Maintenance.....	300
6.3.1	Trackside.....	300
6.3.2	Trainborne.....	300
6.4	System Management.....	301
6.4.1	Data management.....	301
6.4.2	System evolution.....	301
	List of Abbreviations.....	303
	Keywords.....	305
	Advertisements.....	310
